

CONCRETE PREP

The **Diamabrush™** Concrete Prep tools have simplified surface preparation for the end-user. When it comes to coating your concrete floors, surface preparation has always been the most expensive and most difficult step in achieving a successful, long-lasting coated floor. The quality of your surface preparation will determine the quality of your end result. Traditional methods of surface preparation include shot blasting and large diamond grinding. These methods are expensive, often require significant training and know-how and may require 480 volt three-phase power. Now, both professionals and do-it-yourselfers can prepare and profile old, worn, dirty floors using standard 110 volt or battery powered cleaning equipment, such as automatic scrubbers or single-disc flooring machines. Achieve professional results – every time – using **Diamabrush™**.

- **SIMPLICITY** – use on existing, standard equipment such as automatic scrubbers and flooring machines
- **SUSTAINABLE** – the Diamabrush™ system is a mechanical preparation solution that is chemical-free
- **COST EFFECTIVE** – achieve a professional profile for coating systems up to 30 mils thick at a fraction of the cost of traditional surface preparation methods

CONCRETE PREP

The **Diamabrush™** Concrete Prep tools are simple to use. To get started, end-users will need to provide the following to determine what brushes are required for their project:

- 1) Make and model of machine
 - a. Is it a walk-behind or small ride-on machine or a large ride-on machine
- 2) Size (diameter in inches) of brushes
- 3) Starting condition of floor:
 - a. Old, worn or pitted
 - b. Smooth and dull
- 4) Overall square footage to be restored

Once the required brushes are determined, you are ready to begin preparing your floor! Please contact a **Diamabrush™** representative at our customer service line at: **1 (855) DB-TOOLS** with any questions or concerns.

Works On Standard Rotary Machines
